

PANTAZOLE 2500

BOLUS FOR ORAL ADMINISTRATION

Composition:

Each bolus contains:
2500 mg albendazole

Spectrum:

Albendazole is a benzimidazole anthelmintic active against most nematodes and some cestodes.

Activity in cattle, goats and sheep against the following genera:
Gastro intestinal nematodes: Larval and adult stages of *Haemonchus*, *Ostertagia*, *Trichostrongylus*, *Nematodirus*, *Cooperia*, *Bunostomum*, adult stages of *Oesophagostomum*, *Chabertia* and *Strongyloides*.

Lung worms: *Dictyocaulus* spp.

Tape worms: *Monezia expansa*.

Trematodes: *Fasciola hepatica* (adult liver fluke).

**Indications:**

Infections with helminths susceptible to albendazole in sheep, goats and cattle.

Contra-indications:

Administration to ewes and cattle during early pregnancy (the first 45 days). Use in lactating animals whose milk is to be used for human consumption.

Side-effects:

No side-effects are reported when used at therapeutic doses.

Dosage and administration:

For oral administration: 1 bolus per 250 kg bodyweight.

The general dose is 7.5 mg albendazole per kg body weight. For control of adult liver flukes (*Fasciola hepatica*) a dosage of 10-15 mg/kg body weight is required.

Withdrawal time:

Meat: 12 days.

Storage:

Store at 15-25 °C in a dry place

Shelf life:

3 years.

Presentation:

Box of 50 boli (blistered)

FOR VETERINARY USE ONLY
